

## DR-R-298 DC Motor Driver L298

---

### **User Guide**

This Breakout-Module is DC motor driver using L298. This is most commonly used driver circuit in hobby robots.

This can control 2 DC Motors, their direction using control lines and their speed using PWM.

Maximum current rating per channel: 2A  
Maximum Supply voltage for Motors: 50V  
Maximum Logic Voltage: 7V

Interface it with any microcontroller.

This board is assembled with all components.

## Schematic
